Project Idea: Book Lending Library

The application will be a book lending web application called Library Link where users can digitally manage books which they own. They will be able to lend books to others and track the status of their books. The core features of the application will consist of a Book catalog management, lending process, book search and filter, and Lending history tracking.

The book catalog management will allow users to add, edit, view, and delete book entries. The lending process will enable users to mark when a book is lent out and specify the borrower by name/email, as well as setting an expected return date. The book search and filter feature will allow users to browse and search for books using their title/author, and filter by availability. Finally, the lending history tracking will keep a record of all borrowed books, including who borrowed each book and when they would be returned.

Library Link will provide users with a convenient way to organize their personal book collections and share their favorite reads with others. The platform aims to make the process of borrowing and lending books simple and transparent.

Task Allocation:

| Excel                                                                                                                                                                                                                                                                                                                                                                                                                                             | Rayyan                                                                                                                                                                                                                                                                                      | Zain                                                                                                    |
